

LUNA TESTING LTD

ENVIRONMENTAL POLICY

We believe the environment needs to be protected both locally and nationally and indeed, globally and although our carbon footprint may be small, we are committed to maintaining a minimum impact on the environment as our company expands.

Our work brings us to very different environments as we cater to our client's requirements and our policy extends to all premises and to adhering to all clients policies on site whilst maintaining our commitments to our own policy.

How we will commit

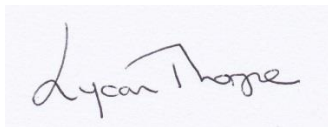

- I. By identifying, collating and managing all aspects of the business to maintain and improve our carbon footprint.
- II. By constantly updating our database with relevant environmental legislation and requirements
- III. By ensuring all employees, colleagues and sub-contractors are aware of and have a copy of the environmental policy.
- IV. By implementing training and awareness where necessary
- V. By recycling all materials wherever possible and restricting landfill material to a minimum
- VI. By adhering to onsite environmental policies when disposing of waste materials
- VII. By planning to use only low emission producing lease cars in the future

LUNA TESTING LTD

- VIII. Reuse
- IX. Rethink before we purchase goods
- X. By reducing the need for paper and promoting online services as opposed to hard copy reports
- XI. By using battery powered test equipment with a long life guarantee, thus using less electricity
- XII. By insuring our environmental policy will infiltrate through all areas of the company and its decision making in the future

This policy statement is subject to constant reviews in line with new legislations and requirements
